

FOR IMMEDIATE RELEASE:

redit Announces Strategic Partnership with BridgeSTOR

San Diego – July 29, 2014 – [redit](#), the emerging leader in secure, customizable managed [cloud computing](#), connectivity and [data center services](#), announced today its strategic partnership with [BridgeSTOR](#), the company making cloud storage accessible.

The added capabilities provide redIT the flexibility to create the ideal storage management infrastructure for all of its clients.

“The redIT Managed Storage Gateway is designed to accommodate today’s needs and address the exponential growth in data the future will inevitably bring,” says Matt Stamper, VP of Managed Services for redIT. “Integrating best-of-breed innovative technologies from BridgeSTOR along side other providers such as Amazon Web Services (AWS) means we can offer the most cost-effective and seamless approach to protecting all of our clients’ data.”

Together, the two companies will work with redIT’s channel partners to provide services focused on remote office locations for small and medium enterprises that would otherwise not be able to access such capabilities in a cost-effective manner. The partnership is designed to address a number of enterprise requirements, including on-site storage services for company data as well as highly durable, off-site copies of the data.

“Working with redIT is a natural fit for us,” notes John Matze, CEO of BridgeSTOR. “redit’s large client base in both the United States and Mexico coupled with its extensive network assets and relationship with Amazon Web Services offered us the opportunity to address a number of client requirements. We’re looking forward to what we can do together.”

About BridgeSTOR

BridgeSTOR, LLC, the Cloud Storage Access Company, headquartered in Poway, Calif., near San Diego has created a Cloud Storage File System (CSFS™) to extend and enhance the usability and manageability of cloud storage, including Amazon S3™, and other cloud vendors by transforming complex and sophisticated object-based storage into traditional file-based storage accessible by standard Windows or Linux-based applications and management tools. BridgeSTOR strives to make cloud data access simple and affordable to organizations of all sizes.
